

# UNIT 4

## HOW MANY DONATIONS ARE NEEDED

### **1300 donations**

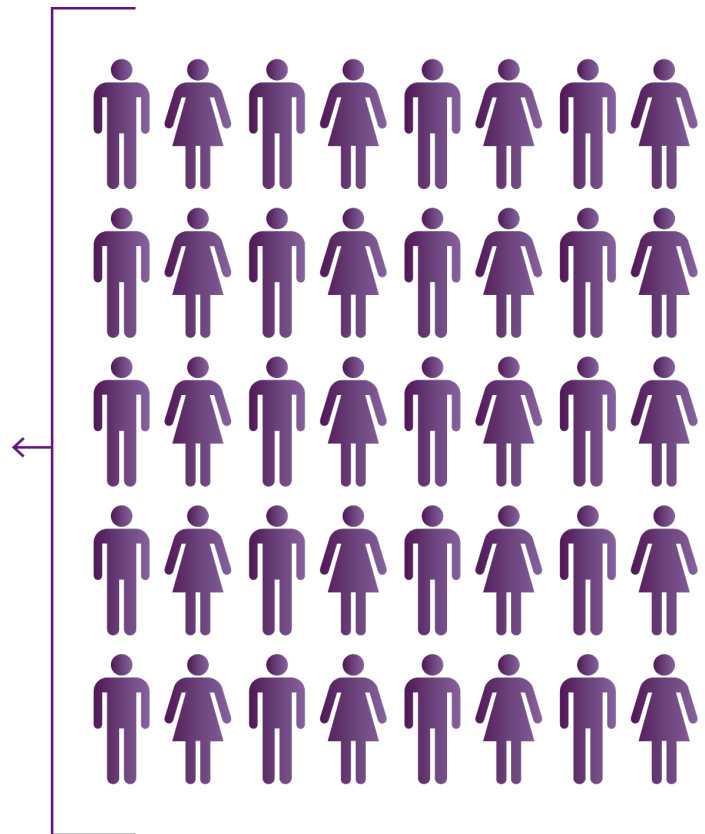

To treat one patient with hemophilia for one year

### **900 donations**

To treat one patient with alpha-1 antitrypsin (AAT) deficiency for one year

### **130 donations**

To treat one patient with immune deficiency for one year

Because it takes so many donations to treat our patients, it is important that we have donors who are committed to donating plasma regularly.

**Each donation undergoes a minimum of 10 tests.**
