

UNIT 5

SOCIAL RESPONSIBILITY WORKSHEET

Grifols also performs an important social task.

We are no strangers to the debate around the ethics of science and, in particular, we care about all the implications that biological research may have for human beings.

That is why the **Víctor Grifols i Lucas Foundation, created in 1998, promotes bioethics** through the dialogue between specialists from different areas of knowledge involved in human health.

Meanwhile, **the Probitas Foundation, which also belongs to Grifols, conducts programs to improve healthcare in developing countries.**

The purpose of this foundation is to help the most vulnerable, so we all have the same opportunities.
